Azure OpenAI Deployments for SwissHacks 2025

For SwissHacks 2025, we have provided the following models via Azure OpenAI. Because quotas (token throughput per minute) per model and region are limited within an Azure subscription, several Azure OpenAI resources (equivalent to different endpoints and keys) have been deployed in different regions.

In order to provide the highest possible quota per model for the participants, models were selected that are available as standard in various regions in the so-called "Global Standard".

In addition, as a developer, you can find various documentation on how to use Azure OpenAI under the following links:

- [Overview](#)
- [Python SDK](#)

Models

The following models are available:

Model	Modality	Quota per endpoint/deployment (tokens per minute in the global standard)
gpt-4o	Text-to-Text, Image-to-Text	450k
gpt-4o-mini	Text-to-Text, Image-to-Text	2M
gpt-4o-realtime-preview	Real-time audio	6'000
o3-mini	Text-to-Text	5M
text-embedding-3-large	Text-to-Embedding	1M
whisper	Text-to-Speech	

These models are available in various regions with comparatively high quotas. The exact availability and amount of the quotas can be found under these links:

- [Model availability by region in the Global Standard](#)
- [Allowances per model](#)

Access Keys

You can get the keys for access at the Raiffeisen Booth

Need for additional Azure OpenAI resources

If further models are required, please feel free to contact the Raiffeisen booth.

The models are all provided with Pay-As-You-Go.
